Practice School II Report (Mid semester),2026

INTERNSHIP REPORT

PREPARED BY

Aman Bharti

(2022BTECH121)

EXTERNAL SUPERVISOR

Ayush Anand (Xorblin Digital Pvt. Ltd.)

FACULTY SUPERVISOR

Dr. Pranab Roy

Department of Computer Science and Engineering

Institute of Engineering and Technology

JK Lakshmipat University, Jaipur

Rajasthan – 302026

March,2026

CERTIFICATE

This is to certify that the Practice School-II project work entitled "**INTERNSHIP REPORT**" submitted by **Aman Bharti (2022BTECH121)** towards the partial fulfillment of the requirements for the degree of **Bachelor of Technology in Computer Science and Engineering** of JK Lakshmipat University Jaipur is the record of work carried out by him under my supervision and guidance. In my opinion, the submitted work has reached a level required for being accepted for Practice School-II examination.

Dr. Pranab Roy
Internal Supervisor

Department of Computer Science and
.Engineering
Institute of Engineering & Technology
JK Lakshmipat University Jaipur

Date of Submission – 06/03/2026

ACKNOWLEDGEMENTS

I am grateful to all those who have contributed to my PS-II, which has been a very valuable experience. Firstly, I would like to extend my thanks to my External Supervisor, Ayush Anand, for his valuable feedback throughout the internship. I am also deeply grateful to my Faculty Supervisor, Dr. Pranab Roy, for helping me remain diligent and punctual throughout my PS-II. I extend my gratitude to JKLU for providing me with this opportunity. Lastly, I am grateful to my family and friends for their support which motivated me to give my best throughout the internship. Thank you all for your contributions and support.

Sincerely Yours,
Aman Bharti

ABSTRACT

This report presents the progress and outcomes achieved till the mid-semester phase of the Practice School II internship.

The internship focuses on the design and development of a cross-platform mobile application using Flutter, along with UI/UX design, localization, and foundational system architecture planning.

The work completed so far includes designing application interfaces, implementing onboarding and authentication workflows, structuring the application architecture, and preparing the system for future backend integration.

This report documents the organization overview, project objectives, tools and technologies used, roles and responsibilities, work completed to date, and future plans for the remaining internship period.

CHAPTER 1: ABOUT THE ORGANIZATION

1.1 OVERVIEW

Xorblin Digital Pvt. Ltd. is a technology-driven organization specializing in building scalable, secure, and intelligent digital solutions for startups and enterprises. The company operates in domains such as mobile application development, web platforms, artificial intelligence solutions, and SaaS-based systems.

The organization emphasizes structured development practices, agile methodologies, performance optimization, and scalable architecture. It works closely with emerging businesses to transform traditional processes into efficient digital ecosystems.

1.2 MISSION

The organization aims to enable future-ready digital growth by delivering dependable software systems, resilient cloud infrastructure, and intelligent AI-driven solutions. Xorblin emphasizes innovation, integrity, collaboration, and excellence in its service delivery.

1.3 SERVICES OFFERED

- Mobile Application Development (Android & iOS – Flutter-based)
- Web Application Development
- SaaS Product Development
- UI/UX Design Systems
- Cloud Deployment & Infrastructure Setup
- REST API Development & Integration

CHAPTER 2: INTRODUCTION

2.1 Context and Problem Definition

The Vedic ritual sector is largely informal. For centuries, finding a qualified Pandit was a matter of community networks. However, in urban settings these networks are often unavailable. Users face several problems:

- No centralized platform exists to book verified scholars.
- Tracking auspicious "Muhurats" and festival dates is complex for the average user.
- Lack of availability scheduling
- No digital booking confirmation system
- Limited accessibility for users outside local networks

2.2 Proposed Solution

Our app serves as a digital marketplace. It provides a curated list of verified Pandits, a clear list of rituals (Pooja/Havan), and an integrated calendar. By digitizing this experience, we provide standardized pricing, user reviews, and instant booking capabilities.

2.3 Project Objectives

The major objectives of this internship are:

- To design and implement a structured mobile architecture using Flutter.
- To develop user authentication and onboarding flows.
- To implement bilingual dynamic localization.
- To design a scalable frontend structure for future backend integration.

CHAPTER 3: TOOLS AND TECH STACK USED

3.1 Framework and Programming Language

Flutter
Flutter is used for cross-platform application development. It allows building both Android and iOS applications from a single codebase.

Dart
Dart is the programming language used in Flutter. It supports object-oriented programming, asynchronous programming, and strong typing.

3.2 Development Tools

- Visual Studio Code (VS Code)
- Git for version control
- GitHub for repository management

3.3 UI/UX Design

FIGMA
Figma was used for designing the interface layouts.

3.4 Localization

Dynamic internationalization (i18n) has been implemented to support English and Hindi languages. This ensures cultural inclusivity and broader accessibility.

CHAPTER 4: ROLES AND RESPONSIBILITIES

4.1 Objectives During Internship

During the mid-semester period, my objectives were:

- Understanding project requirements and system architecture.
- Implementing onboarding workflows.
- Designing and coding authentication flows.
- Structuring the application using modular design.
- Implementing localization features.

4.2 Roles and Responsibilities

My primary responsibilities include:

- Designing responsive UI screens.
- Implementing multi-step login and signup flows.
- Structuring app navigation.
- Implementing state persistence.
- Maintaining clean and modular code practices.
- Coordinating with the external supervisor for feedback.

CHAPTER 5: WORK DONE

5.1 Internship Work Done So Far

Phase 1: Research and Design

- Requirement gathering
- Domain research
- Application flow planning
- Architecture structuring

Phase 2: Core Frontend Development

- Implemented 3-screen animated onboarding carousel.
- Designed and developed multi-step authentication flow.
- Structured error handling.
- Created centralized theme and design system.

Phase 3: Navigation and Modular Settings (Current Phase)

- Implementing bottom navigation architecture.
- Designed modular settings interface.
- Structured reusable widgets.
- Organized folder hierarchy for scalability.

WEEKLY LOG BOOK

My internship began on 06 January 2026 with the primary objective of contributing to the design and development of a mobile application. Over the course of nine weeks, I was involved in understanding project requirements, designing user interfaces, implementing them in Flutter, improving the design system, and integrating backend APIs. The following is a detailed week-wise summary of the work completed so far.

Week	Activities Performed
Week 1: Induction & Project Allocation (06 January 2026 – 09 January 2026)	The first week was dedicated to internship onboarding and introductory sessions. I was introduced to the organization's workflow, development standards, and ongoing projects. Detailed sessions were conducted to familiarize interns with upcoming and planned application projects. By the end of the week, the proposed projects were reviewed and interns were allocated accordingly. I was selected to work on the mobile application development project.
Week 2: Requirement Discussion & UI Design Initiation (12 January 2026 – 16 January 2026)	During this week, detailed discussions were held regarding the application roadmap, feature planning, and development milestones. After understanding the project scope, I began working on the UI design. The Signup Page UI was designed in Figma and finalized after iterations and reviews. The focus was on maintaining a clean, user-friendly, and modern interface aligned with the brand guidelines.
Week 3: Login & Onboarding UI Design (19 January 2026 – 23 January 2026)	At the beginning of this week, I designed the Login page UI in Figma, ensuring proper spacing, alignment, and form structure. Once the Login design was finalized, I moved on to designing the Onboarding screens. These screens were created to introduce new users to the app's key features in a structured and engaging way. Special attention was given to visual hierarchy and smooth flow between screens. By the end of the week, the major UI designs for the initial user journey were completed.
Week 4: UI Verification & Login Page Development (26 January 2026 – 30 January 2026)	This week involved verification and refinement of all previously designed UI screens. Necessary corrections were made to ensure design consistency and alignment. After finalizing the designs, I started implementing the Login Page using Flutter. The UI was converted from Figma to functional Flutter code, including input fields, validation logic, and navigation handling. The Login Page development was completed by the end of the week.

Week 5: Signup Page & Onboarding Development (02 February 2026 – 6 February 2026)	During this week, I began coding the Signup page in Flutter. The implementation included designing input fields, validation mechanisms, and preparing the structure for future API integration. After completing the Signup page, I initiated the development of the Onboarding screens. The focus was on replicating the Figma design accurately while implementing smooth navigation between screens. Work on the onboarding module continued through the week.
Week 6: Onboarding Completion and Navigation Bar Design (9 February 2026 – 13 February 2026)	At the start of the week, I completed the Flutter implementation of the Onboarding screens, ensuring responsiveness and smooth transitions. Following this, I shifted my focus to designing the Navigation Bar in Figma. The aim was to create a simple yet efficient navigation structure for the main sections of the application. The design was finalized after internal review and discussions.
Week 7: Theme Centralization and Navigation Bar Development (16 February 2026 – 20 February 2026)	This week introduced structural improvements to the application. I centralized the app's color scheme to ensure consistency and easier scalability in future updates. This involved restructuring the theme configuration so that design changes could be managed more efficiently. In parallel, I started implementing the Navigation Bar in Flutter and completed its core functionality by the end of the week.
Week 8: Design Updates & Profile Page Development (22 February 2026 – 27 February 2026)	The Navigation Bar was integrated into relevant screens to establish a unified navigation flow across the application. During this period, I also designed the Profile page in Figma and subsequently implemented it in Flutter. The Profile page structure included user information sections and proper layout organization. Additionally, a meeting was conducted to discuss design improvements, and necessary UI modifications were made accordingly.
Week 9: API Integration and Design Modifications (02 March – Now)	This week marked the transition from static frontend development to dynamic backend integration. I successfully integrated the SignUp API along with OTP verification functionality.

CHAPTER 6: FUTURE PLAN

The upcoming development phases include:

Phase 4: Backend and API Integration

- REST API integration
- User authentication with backend
- Booking workflow implementation
- Database connectivity

Phase 5: Advanced Features

- Google Sign-In implementation
- Profile management system
- Real-time availability tracking
- Booking confirmation workflows

Phase 6: Testing and Optimization

- Performance optimization
- Debugging and edge case handling
- UI responsiveness testing
- Final deployment preparation

The focus will be on building a production-ready, scalable solution.

CHAPTER 7: CONCLUSION

The mid-semester phase of the Practice School-II internship has provided significant exposure to real-world application development. The project not only strengthened technical skills in Flutter and Dart but also enhanced understanding of software architecture, modular coding, and UI/UX consistency.

Through this internship, I have gained practical experience in:

- Structuring scalable mobile applications
- Implementing multi-step authentication systems
- Managing localization workflows
- Applying clean code principles
- Coordinating development under professional supervision

The project is progressing steadily toward backend integration and complete feature implementation. The remaining internship period will focus on enhancing functionality, integrating APIs, and preparing the application for real-world deployment.

Overall, this internship experience has significantly contributed to both technical growth and professional development.
